S28, Switch for air horn

S28, Switch for air horn

The role of the circuit is to allow the activation of the air horn when the ordinary horn is activated.

The circuit consists of a switch (S28) and a solenoid valve (V44) and is connected to the horn switch (S26). When switch (S28), which is a toggle switch, is activated a connection with solenoid valve V44 is completed. The solenoid valve is therefore also supplied with power which releases air to the air horn, when the horn switch (S26) is activated.

Horn

Indicates that the control unit output is activated.
