S70, Button panel for vehicle time and instrument panel lighting

S70, Button panel for vehicle time and instrument panel lighting

The button kit is used to change the vehicle time and increase or reduce the instrument lighting in the vehicle.

The four buttons in the button panel are used to change the vehicle time and increase or reduce the instrument lighting in the vehicle. The buttons have the symbols Plus, Minus, Zero and Clock. These have slightly different functions dependent on which display you are in and whether the button is given a long or a short press. Each button is connected to a separate pin on the control unit.

Minus button

Active when the minus button is pressed.

Plus button

Active when the plus button is pressed.

Clock button

Active when the clock button is pressed.

Zero button

Active when the zero button is pressed.
